TECHNICAL ENGLISH EXAMINATION (Session de Juillet 2019)

INSTRUCTION: Tick where there is no good answer

NB : L'usage du téléphone est strictement interdit.

A. MATCH EACH ACRONYM TO ITS MEANING AND COMPLETE THE CHART

1. **ACD**: a) automatic call distributor

    b) Automatic celphone display

2. **ASCII**: a) American non- standard code for information interchange

    b) American standard code for interchange information

3. **EDGE:** a) Enhanced data rates for unglobal evolution

    b) Environmental domestic generated evaluation

4. **IMEI**: a) International mobile equipment for identification

    b) Interdependence module equivalent for identification

5. **SDH**: a) Symbolic divert hypertext

    b) Synchronous digital hierarchy

6. **HTTP**: a) Hypertext transfer programmable

    b) Hypertext transport protocol

1		2		3		4		5		6	

B. ANSWER BY YES OR NO

1. Printing is a final stage in creating a document . . . .

2. The terminal and the keyboard are always considered as VDU . . . .

3. The printer is always connected by the CPU and controlled by GDS . . . .

4. The control unit examines the instructions in the user's alimentation . . . .

A. MATCH EACH ACRONYM TO ITS MEANING AND COMPLETE THE CHART

1. **SDH**: a) Synchronous digital hypertext
        b) System divert hypertext
2. **PABX**: a) Private branch exchange
         b) Post applied for branch exchange
3. **SOAP**: a) Single oriented accommodation proof/power
          b) Simple object access protocol
4. **ENIAC**: a) electronic and numerical interaction action code
           b) Electromechanical, numerical interchangeable calculator
5. **HIPO**: a) hypertext international protocol organization
         b) Hierarchy input plus out put
6. **BASIC**: a) Beginners all sequential interaction code
          b) Beginners all symbolic instruction code

1	**2**	**3**	**4**	**5**	**6**

B. ANSWER BY YES OR NO

1. Ram is used to store and retrieve information during the execution of program on the pc . . . .
2. Buffer is used to store temporary data before storage . . . .
3. VDU can perform all the mathematical calculations . . . .
4. The registers are high speed units of memory used to store and not to control information . . . . . .
